

## Overview

Our 5007 Class 2 Striped Reflective Tape is an engineering grade retro reflective product. It provides excellent light reflection and its striped, bright colours are very easy to spot in low light or direct sun. This tape can be used indoors or outdoors and is very long lasting.

Class 2 Reflective Tape is available in a selection of colours for marking and identifying different types of hazards, lining signs and more.

It has a total thickness of 0.33mm which includes the backing and the aggressive, permanent acrylic based adhesive. This adhesive bonds well to almost all surface types (exceptions are things like PTFE which almost nothing sticks to) and retains this bond strength over a long time.

5007 Class 2 Reflective Tape can be printed on or overlaid with graphics. Each roll is supplied with a release paper liner that is very easy to remove and makes application quick and simple. This tape can withstand temperatures between -20°C and +80°C and meets both EN 12899-1 and ASTM D 4956 standards.

Used for a variety of applications including...

- Identifying bollards, posts and other objects in underground car parks.
- Identifying potential dangers around the home.
- Vehicle marking and identification.
- Marine marking and identification.
- Traffic signs.
- ...
- Work signs.
- Drawing attention to potential head hazards in commercial facilities.
- Anywhere a potential hazard must be visibly marked out.

## Custom Sizes of 5003 Striped Reflective Tape.

All the standard sizes of 5003 Reflective Tape listed on the next page are cut to size using our slitting facilities.

This means that we can also offer custom width rolls to suit your exact needs. If you do need a width that isn't listed (say, 60mm) just let us know and we'll do our best to assist.

## Key Specifications
