

Overview

Corro-Protection Spray is a specialised type of Corrosion Protection spray manufactured in Germany. This spray will create a long-lasting, wax, transparent barrier that prevents moisture or weather reaching the surface. This prevents the formation of rust and corrosion.

Corro-Protection is used all over the world for protecting unpainted metal, seldom used tools and items that need to be protected during international sea freight shipments.

This high quality spray is approved by the German TUV (German technical inspection association) and is very easy to use. Since it's a spray, it's very easy to ensure good coverage of odd-shaped tools and components and to cover large surfaces fast. The semi-transparent nature of the film helps ensure that you can spot which areas you've covered or missed.

Once applied and dried (which will take about 3 to 4 hours), the waxy film will dry and last to provide ongoing protection. The film will withstand temperatures between -20°C and +80°C making it suitable for use in protecting most parts.

Corro-Protection Spray Size and Info.

To quickly find this spray on our website, just search for the SWM part number listed. Alternatively, browse find it directly at swiftsupplies.com.au/weicon-corro-protection-spray-400ml-cans
