

Overview

A Fingersaver is a high-quality safety tool that allows you to keep your fingers away from danger when working.

When working with flogging spanners, impact wrenches or hydraulic torque equipment it keeps your fingers well away and therefore eliminates risk. It does this by letting you secure the work tool to one end of the safety tool, fasten it, and control it with the other.

The end of the Fingersaver can be held by you, or it can be held in position by a colleague or work mate to further reduce the risk of injury and allow you to focus on the tensioning.

This is a very easy to use product that significantly increases safety without slowing down jobs or being so cumbersome that its use is avoided.

Manufactured in the UK from high quality materials, the Fingersaver is tough and long lasting. Its orange plastic shell is made from high strength moulded plastic while the black strap you can see in the photos is made from seat belt grade material.

The rubber tensioner is also manufactured from high grade compounds which helps ensure effective, long lasting performance even in the face of repeated and demanding tensioning.

FingerSaver Size Info.
