

Overview

Our pipe repair kits are fast, simple and easy to use options for sealing leaks or repairing cracked piping. Manufactured in Germany, these kits consist of a two-part system comprised of our Steel Repair Stick and a resin-impregnated tape.

The Repair Stick putty is easy to mix and apply by hand before setting hard. The tape is highly flexible and can be easily wrapped tight around bends and odd shapes. Once it is wet with water, it will begin to harden to form a solid, lasting wrap.

The sections below describe the various features of this system along with more information on how to use it to repair all kinds of pipes.

Application Areas

These fast, permanent solutions are often used in plant maintenance work in the oil & gas sectors, power generation, chemical processing, and food & beverage manufacturing.

Basically, anywhere there is a large amount of pipe work that needs to be maintained and, occasionally, repaired.

Key Specifications

Repair Tape	
Colour	White
Temperature Rating	150°C
Pot Life	3 – 5 Minutes
Final Hardness	30 Minutes
Shore Hardness	70 Shore D
Steel Repair Stick	
Colour	Dark Grey
Temperature Rating	-50°C to +120°C
Pot Life	4 Minutes
Final Hardness	24 Hours
Shore Hardness	75 Shore D
